

AMENDMENTS TO THE CLAIMS:

This listing of claims will replace all prior versions, and listings, of claims in the application:

LISTING OF CLAIMS:

1. (Currently Amended) A drawn film which is a single layer film of in which at least one outermost layer is a layer (A) that is obtained by monoaxial drawing 4.3 times or more, the layer (A) comprising which comprises a copolymer that is made from 4-methyl-1-pentene and at least one comonomer of ethylene or an α -olefin having 3 to 20 carbon atoms with the proviso that the α -olefin is not 4-methyl-1-pentene, wherein the copolymer comprises 80% or more by mole of 4-methyl-1-pentene units and said layer does not substantially comprise wax or organic silicone compound, wherein the peel area of the film is 50% or more wherein the peel area is determined by overlapping layer (A) on a copper foil having roughened surfaces, placing the drawn film and copper foil between metal plates with cushions, pressing by means of a press at 185 °C and 36 kg/cm² for 30 minutes, cooling to 25 °C, and picking up one end of the film, and peeling the film continuously at a rate of 100 mm/minute and a peel angle of 90°, the peel angle being an angle between the roughened copper foil and the film; and the thermal coefficient of contraction of the film is 20% or more along the direction in which the film is drawn.

2. (Canceled)

3. (Canceled)

4. (Canceled)

5. (Previously Presented) A process for producing a drawn film comprising a layer (A), comprising

the step of drawing, 4.3 times or more, a sheet comprising the layer (A) and a layer (B) which is formed on the layer (A), wherein the layer (A) comprises a copolymer that is made from 4-methyl-1-pentene and at least one comonomer of ethylene or an α -olefin, except 4-methyl-1-pentene, having 3 to 20 carbon atoms and that comprises 80% or more by mole of 4-methyl-1-pentene units and said layer (A) does not substantially comprise wax or organic silicone compound, and the layer (B) comprises polypropylene and/or polyethylene; and the step of peeling the layer (B) from the layer (A).

6. (Canceled)

7. (Previously Presented) A release film, which is the drawn film according to claim 1.

8. (Canceled)

9. (Canceled)

10. (Canceled)

11. (Canceled)

12. (Canceled)

13. (Previously Presented) A drawn film according to claim 1, obtained by drawing a multi-layer sheet comprising the layer (A) and a layer (B) which is formed on the layer (A) and comprises polypropylene and/or polyethylene, to give a drawn multi-layer film having a peel strength between the layers (A) and (B) of 500 g/15 mm or less, wherein the peel strength is measured at 23°C and a speed of 300 mm/minute in a T-shaped peel state on the basis of JIS K6854.

14. (Canceled)

15. (Canceled)
